SOFTWARE RELEASE NOTES

PRODUCT:	**HYPERWARE-II VER 1.26.2.3**
RELEASE DATE:	**8-13-2025**

RELEASE SPECIFIC NOTES:

This is a complete Windows install msi file. It will install the HyperWare-II™ application as well as Windows redistributable files needed by HyperWare-II™ if they are not already installed on the target PC. The redistributable files are standard files provided by Microsoft that are used by most Windows applications for generating dialogs, user interface, etc.

INTELLILOGGER FIRMWARE COMPATIBILITY:

IntelliLogger firmware version IL 1.26.1.1. Note that recent prior firmware versions may also be compatible if neither Modbus nor FTP are included in the Program Net as those functions have been modified in this release.

For optimum compatibility, update the IntelliLogger to IL 1.26.1.1

MODIFICATIONS CONTAINED IN THIS RELEASE:

- Download from CF Card dialog sequence and text corrections for clarity. Specifically, selecting Download resulted in Download and Delete of data.
- Corrected bug whereby in certain conditions HyperWare-II™ could crash in attempt to download data from CF Card.
- Addition of Modbus unit ID user entry range checks
- Text modifications to Modbus client icon dialog for clarity
- Widen MAC address boxes on Logger Configuration dialog (appearance only)
- Scheduler icon dialog text improvements
- Modifications to the USB Driver allowed values which smooth USB driver installation
- Modbus TCP Target Device ID field added for rare interface requirements in some devices
- Fixed HyperWare-II™ crash if Modbus TCP "Test" button is pressed with an incorrect or missing address
